

AVG[®] AntiVirus

When protecting your customers is this easy...

Why complicate?

Your small business customers want to know that they have the latest protection. You want to make delivering this essential service to your customers more profitable and less of a drain on time and resources.

With AVG CloudCare™ you both get what you're looking for. Since it's a pay-as-you-go, keyless service you also don't need to worry about licence renewals.

Protection that's simply easier

This is protection that's not just up-to-date, it's just as effective whether your customers are on the network or working on-the-go.

Fewer malware and protection issues for them mean fewer problems for you to manage. Great protection that's simply more profitable.

Make more money

Our simple, affordable fixed-price approach means that you set the end-user price.

You can use our 30-day free trial to attract new customers and demonstrate the benefits of AVG CloudCare™. It's a great opportunity to make more money right now.

Save time and costs

No one wants the difficulties of manual deployment, updates or deinstallation.

Our free AVG CloudCare™ remote management tool makes all these tasks one-click easy. And because AVG AntiVirus is a pay-as-you-go, keyless service your customers only pay for what's used.

Build your reputation

The single, central management console and automatic alerts keep you in control of protection performance for all of your small business customers.

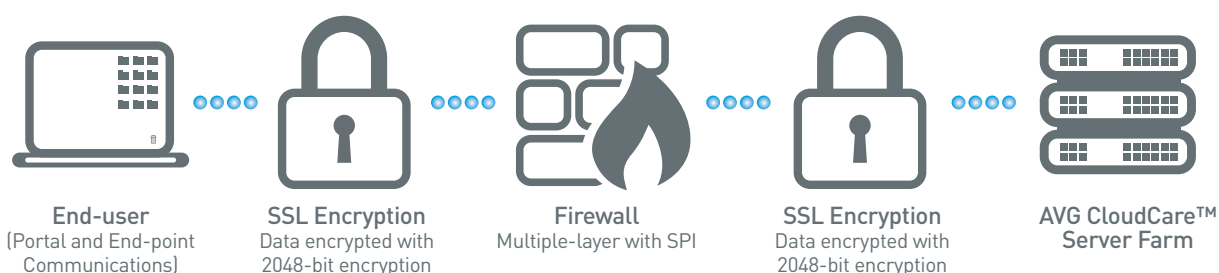

With push policies and automatic updates and upgrades each time they switch on their devices and connect to the Internet, great protection and great service have never been easier or more cost-effective.

AVG AntiVirus

How it works

Fast, efficient and easy

AVG AntiVirus is the fully featured protection that's always automatically kept up-to-date. Fully integrated with AVG® Content Filtering, our very thin client architecture keeps mobile and remote office workers protected wherever they are.

Features

LinkScanner®

Designed to keep your customers' businesses protected from the threats that can hide on any website.

Firewall

With inbound and outbound port and application protection their business is always protected. Identity protection works with the firewall to ensure that the right applications and processes are operating correctly and are also using the right ports for communication.

AVG Smart Scanning

Only performs scans while your customers are not using their devices and runs in low-priority mode while they're working.

AVG Social Networking Protection

Automatically checks the links that are exchanged in applications like Facebook® and Skype® in real time to protect your customers' businesses.

Online shield

Provides direct Web protection for whichever Internet browser your customer decides to use. With direct URL scanning from site to site you can ensure that AVG CloudCare™ will protect them while searching, shopping and banking online.

Identity protection

Shields passwords and credit card numbers and identifies all potentially dangerous software, enabling secure transactions with their clients and suppliers.

AVG CloudCare™ Architecture

- SSL 2048-bit encryption in transit
- Multiple-layer firewalls with SPI
- Private Cloud, fully redundant data centres
- Secure user password enforcement
- Compatible with existing firewalls
- Compatible across all browsers
